

Digimoto gives a Runtime or .NET Framework Initialization Error

If you have recently started getting an error that looks like this one, it

has happened because of some recent Windows updates. We believe that it has to do with the installation of .NET 4. We are in the process of

nailing down the exact issue, but in the mean time to run Digimoto you will need restore your computer to before the update was installed, or uninstall the .NET Framework version. We have had customers have success with both processes.
